Development and Testing of Polar WRF*

David H. Bromwich, Keith M. Hines
and Le-Sheng Bai

*Polar Meteorology Group
Byrd Polar Research Center
The Ohio State University
Columbus, Ohio*

***Supported by NSF, NOAA, and NASA**

Outline

- **Polar Modeling Lessons from Polar MM5 work**
- **WRF development simulations for Greenland**
 - Test vs. AWS and Polar MM5**
 - December 2002 (winter)**
 - June 2001 (summer)**
- **WRF development in the Arctic**
 - SHEBA 1997/98**

Work with Polar MM5

1. Begin with Greenland Testing
2. MM5 was also adapted for polar applications
 - (1) Real-time forecasting/Operational uses - [AMPS](#)
 - (2) Synoptic studies
 - (3) Regional Climate studies
 - (4) Paleoclimate studies
- 3. Polar Optimizations to MM5 physics**
 - (1) Revised cloud / radiation interaction
 - (2) Modified explicit ice phase microphysics
 - (3) Optimized turbulence (boundary layer) parameterization
 - (4) Implementation of a sea ice surface type
 - (5) Improved treatment of heat transfer through snow/ice surfaces
 - (6) Improved upper boundary treatment

Greenland as a Microcosm for Antarctica

North Atlantic Grids for Greenland Polar WRF Simulations

**110 x 100 40 km spacing
28 levels**

**97 x 139 24 km spacing
28 levels**

2 m Temperature at Swiss Camp

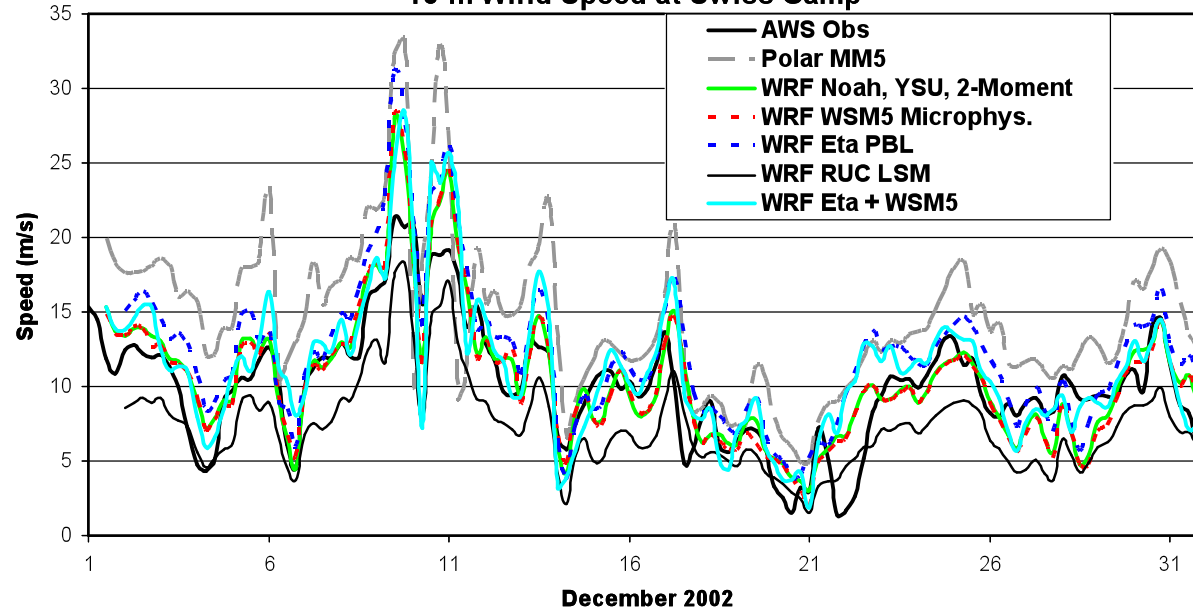

Polar MM5

Correlation 0.93
Bias -2.6
RMSE 3.7

Polar WRF (Noah LSM + Eta PBL + WSM5 Microphys)

Correlation 0.92
Bias -0.1
RMSE 3.1

10-m Wind Speed at Swiss Camp

Polar MM5

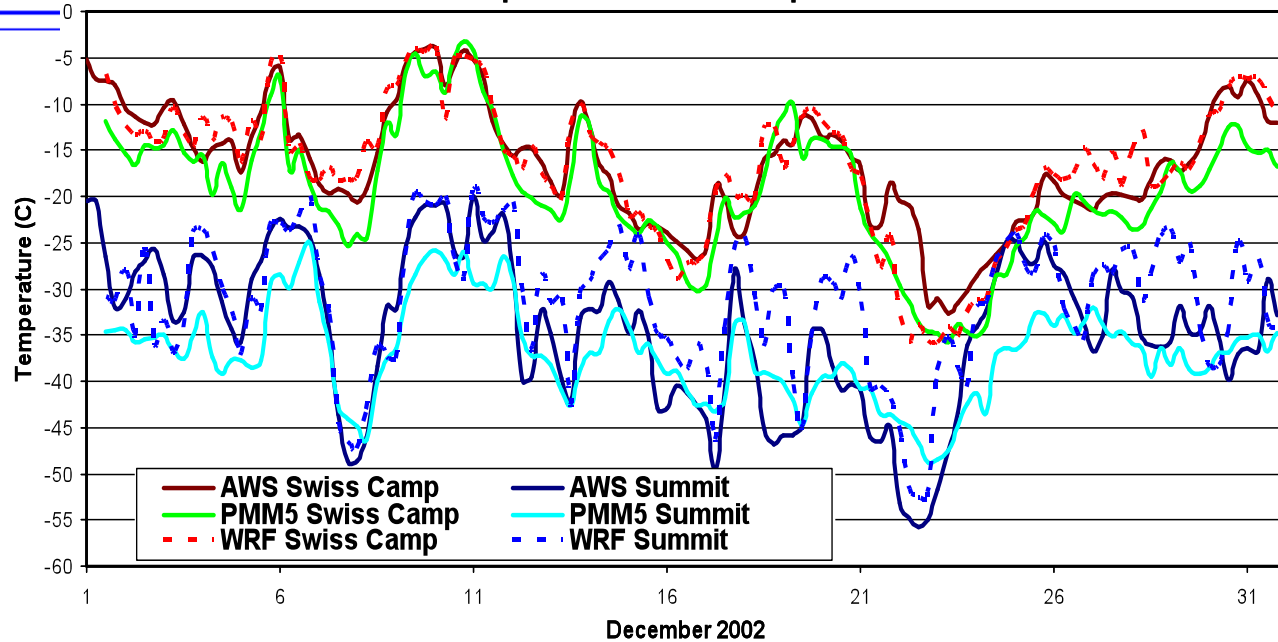

Correlation 0.75
Bias 4.4
RMSE 5.5

Polar WRF

Correlation 0.92
Bias 1.2
RMSE 2.8

2 m Temperature at Swiss Camp and Summit

Polar MM5 (Summit)

Correlation 0.84

Bias -2.3

RMSE 5.6

Polar WRF (Summit)

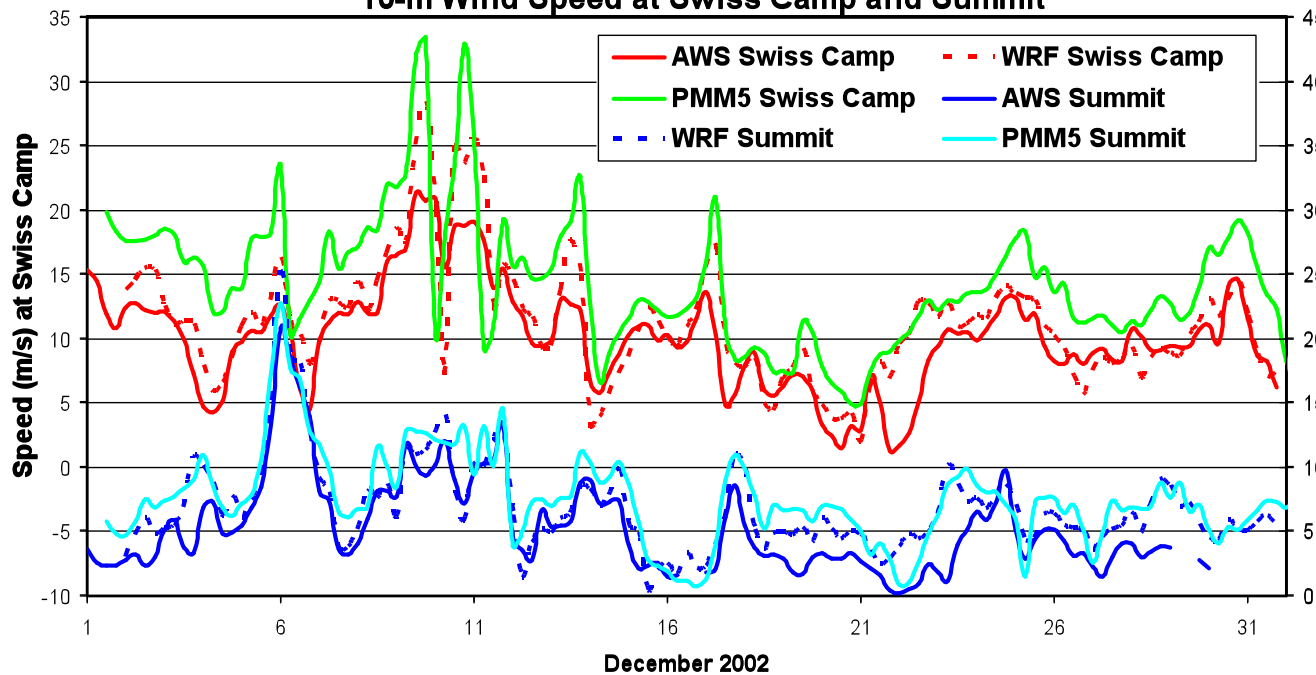

Noah + MYJ + WSM5

Correlation 0.80

Bias 3.0

RMSE 6.0

10-m Wind Speed at Swiss Camp and Summit

Polar MM5 (Summit)

Correlation 0.87

Bias 2.5

RMSE 3.1

Polar WRF (Summit)

Correlation 0.85

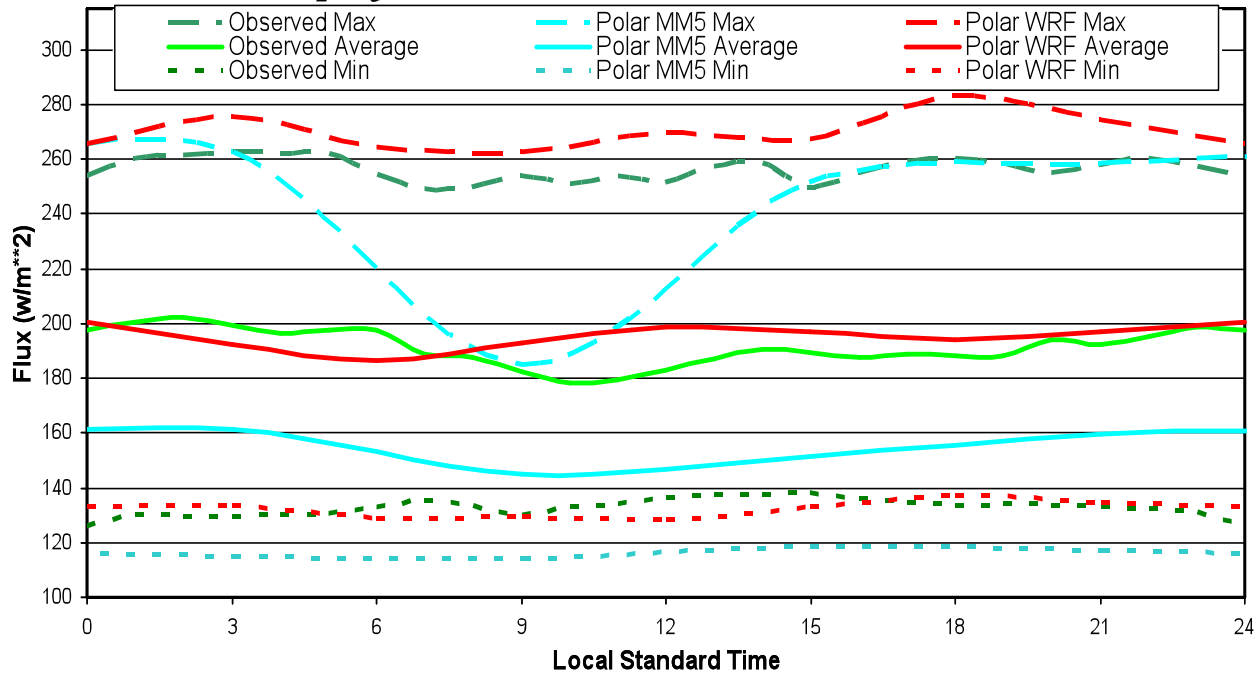

Bias 1.5

RMSE 2.4

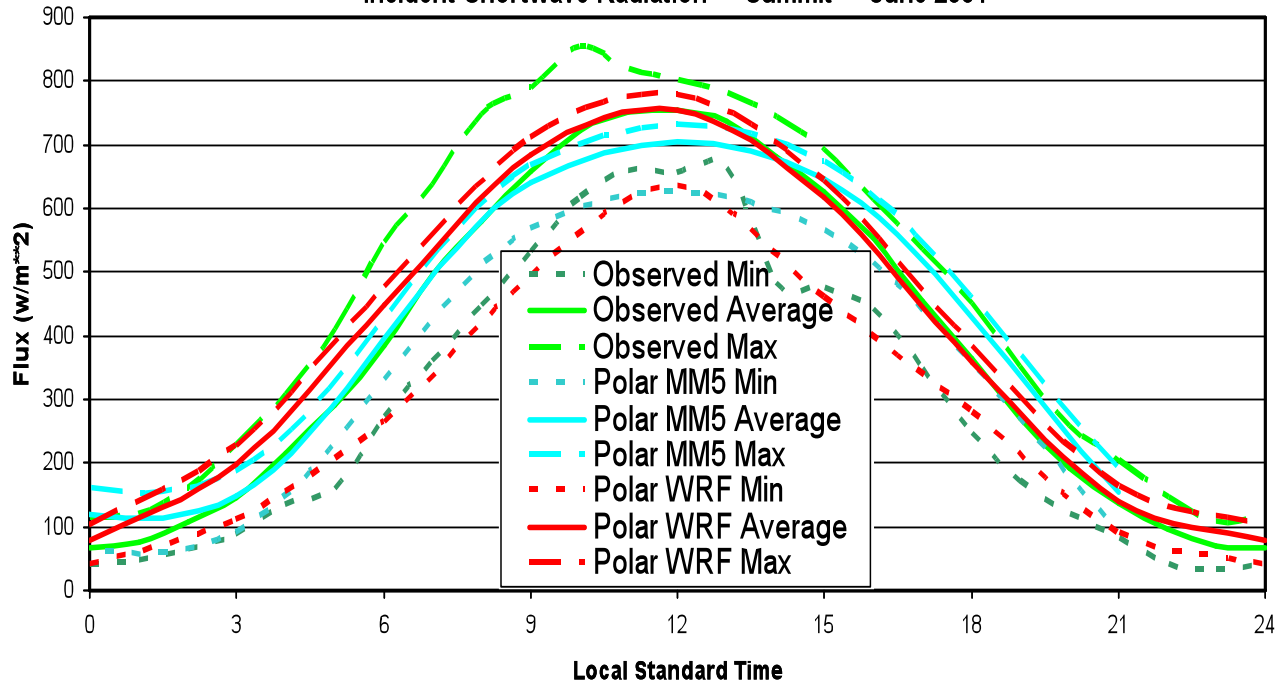

Incident Longwave Radiation at Summit, June 2001

Dr. Byron Pauls, Research Center, The Ohio State

Incident Shortwave Radiation Summit June 2001

Summary of Greenland Simulations

- Following the path of development for Polar MM5, WRF is being optimized for polar applications beginning with Greenland domains.
- Best results for WRF are achieved with the Noah LSM, the MYJ PBL, and the WRF-single moment 5-class microphysics.
- Polar WRF is at least as successful as Polar MM5 for simulations of the Greenland winter surface layer.
- Polar WRF simulations of the Greenland summer surface layer are comparable to those of Polar MM5 when verified with AWS observations, and surface energy balance for Polar WRF is better.

Noah LSM + YSU PBL + Thompson et al. microphysics

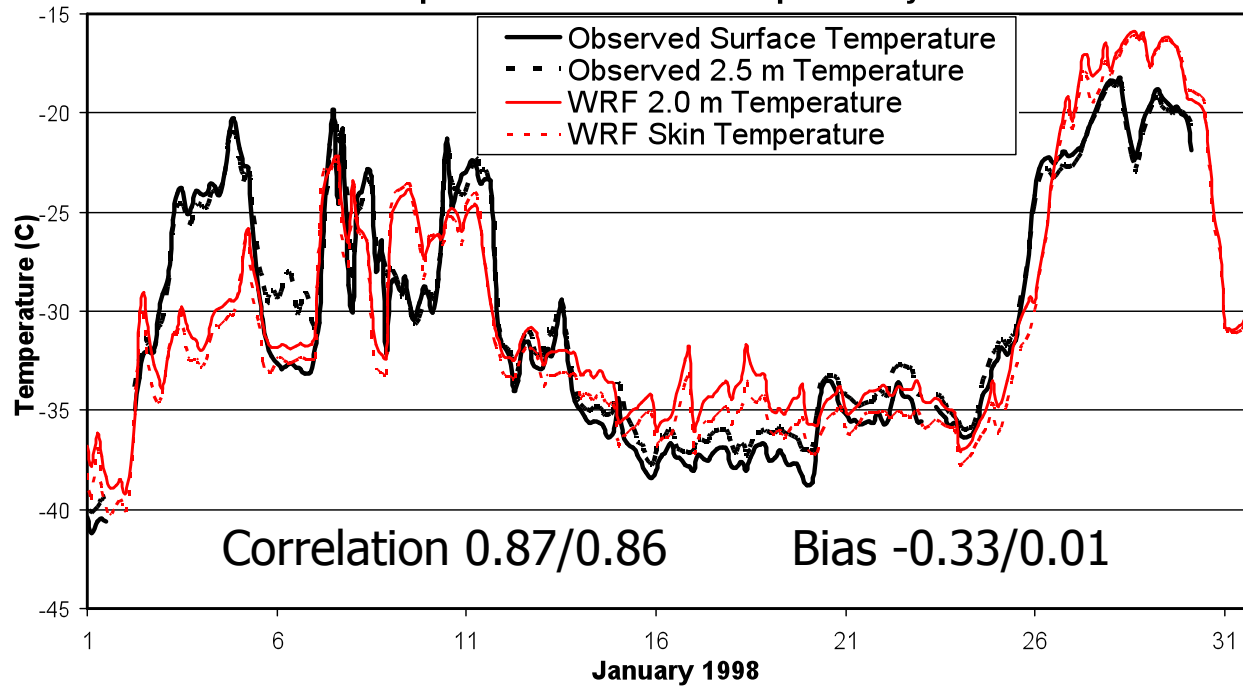

Western Arctic Domain for Comparison with SHEBA observations

141 x 111 25 km spacing 28 levels

Temperature at SHEBA Camp January 1998

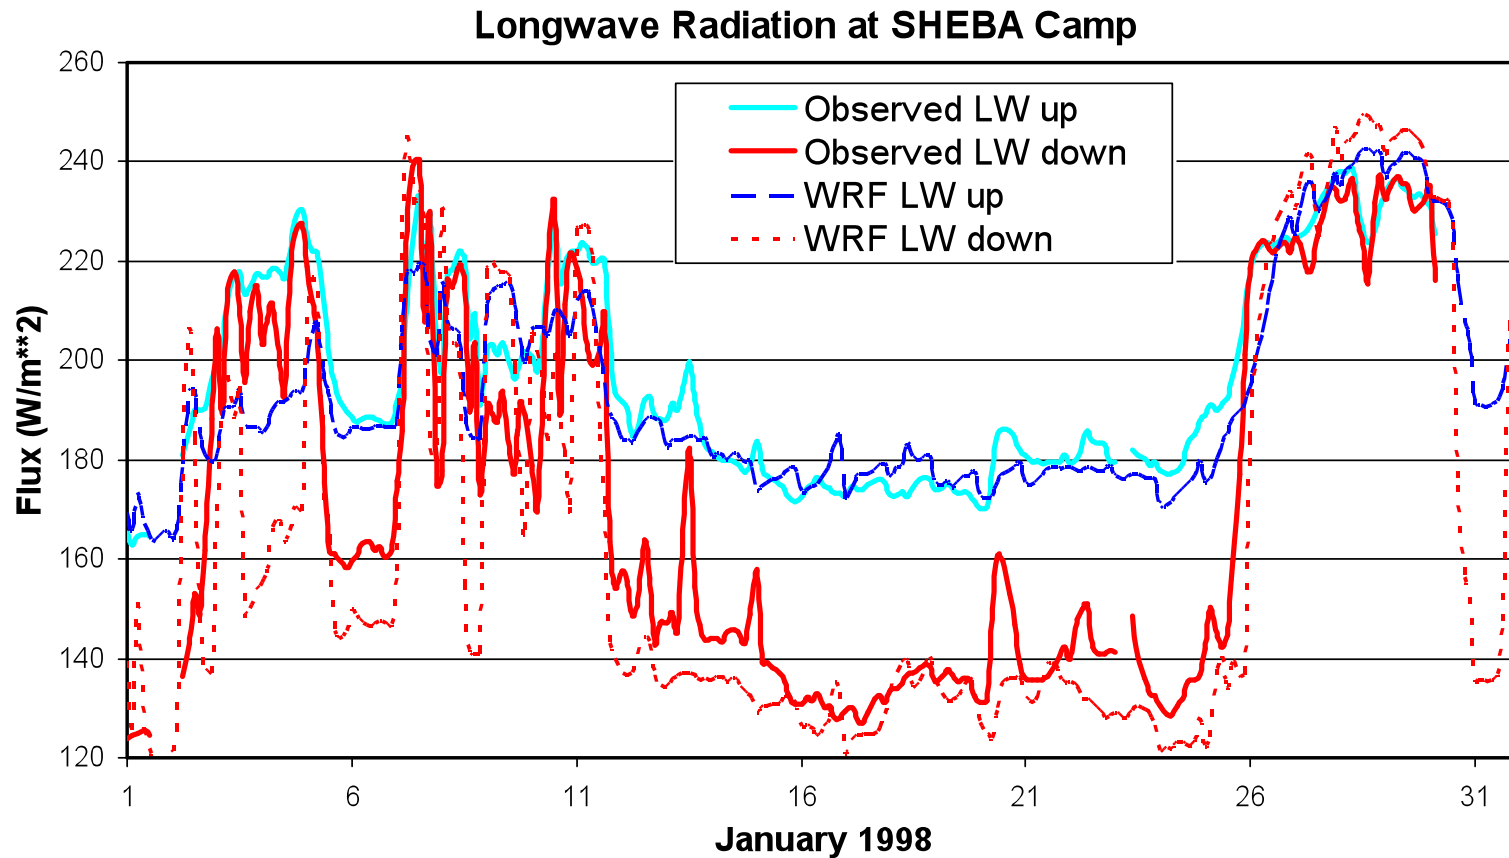

10-m Wind Speed At Sheba Camp January 1998

Good Results for January 1998

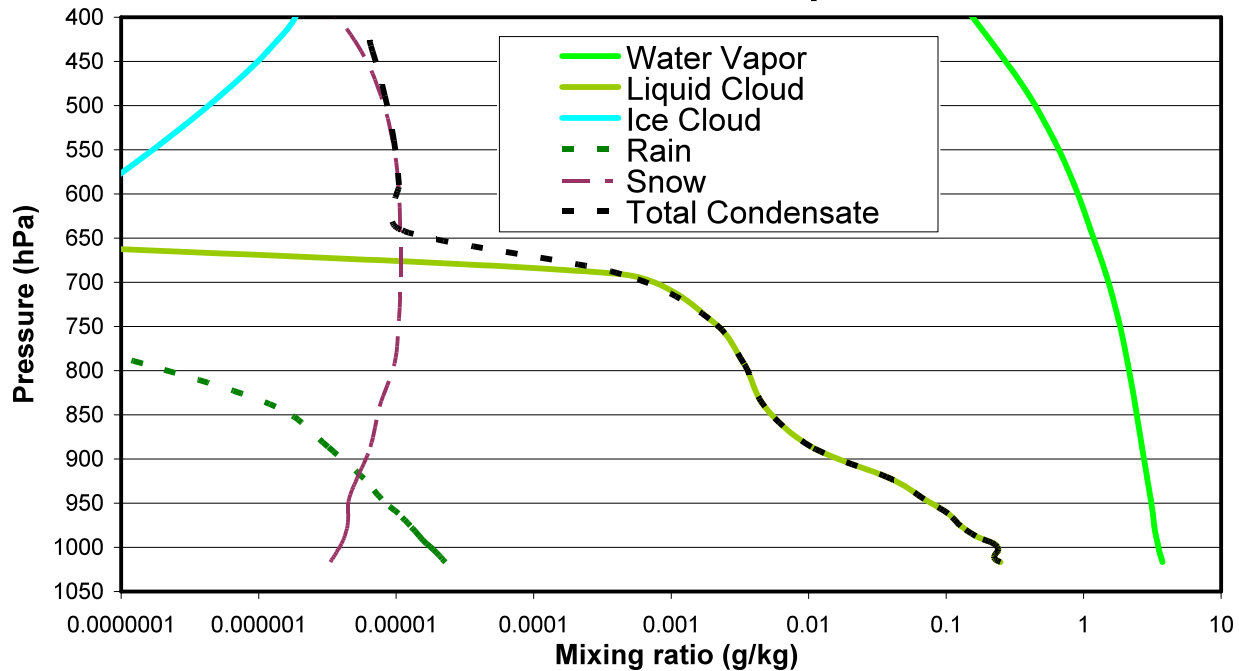

Vertically-Integrated Water Substance at SHEBA Camp

Water Substance at SHEBA Camp June 1998

Needs for Polar WRF

- Test for Arctic land surfaces
- Test fractional sea ice treatment
- More tests needed for cloud microphysics
- Testing and improvements of subsurface treatment for soil and ice
- More testing with AMPS
Antarctic forecasts

Summer Greenland Case: June 2001

97 x 139 grid 24 km spacing

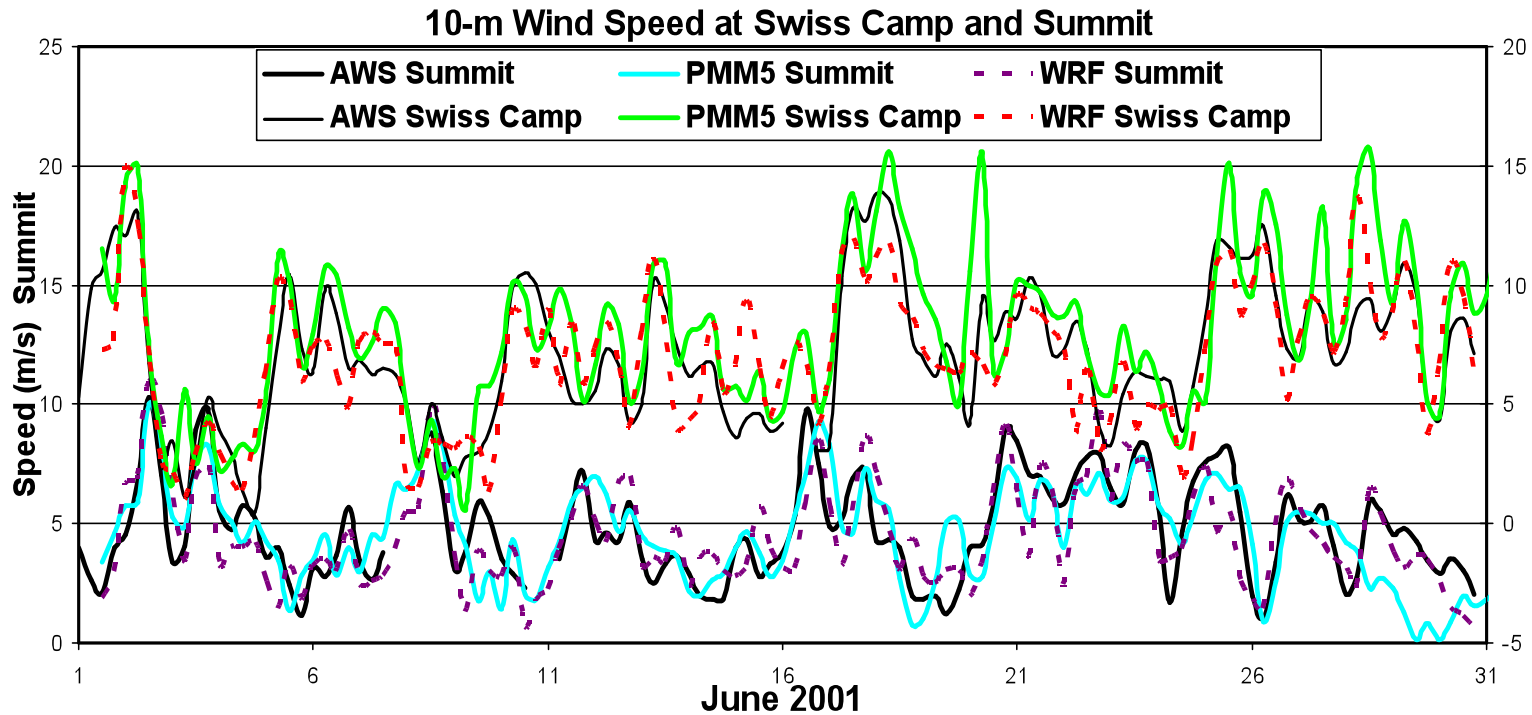

Run	Correlation	Bias	RMSE
Polar WRF - Swiss Camp	0.87	-0.6	1.8
Polar MM5 - Swiss Camp	0.86	-0.7	1.9
Polar WRF - Summit	0.76	2.6	4.8
Polar MM5 - Summit	0.79	-0.1	3.8

Summer Greenland Case: June 2001

97 x 139 grid 24 km spacing

Run	Correlation	Bias	RMSE
Polar WRF - Swiss Camp	0.77	-0.3	2.0
Polar MM5 - Swiss Camp	0.83	1.0	2.1
Polar WRF - Summit	0.75	-0.3	1.5
Polar MM5 - Summit	0.72	-0.1	1.6
